

JDRF : Improving lives. Curing Type 1 Diabetes.

Dear Gummy Beans,

Your donation is improving the lives of all people living with type 1 diabetes (T1D). Thanks to your support, the daily burden of T1D on so many challenged by this disease each day is lessened. Thank you for your recent gift of \$1,000.00.

With your support, JDRF-funded research is bringing life-changing scientific advances to everyone impacted by T1D. We are racing to find cures and to ease the burden of this disease until our mission is complete. Thanks to passionate supporters like you, JDRF fights every day to advance the research that is helping people live fuller, safer and healthier lives. In the past year alone, JDRF has awarded 180 new research grants to find new breakthroughs in beta cell therapies, immune therapies, automated insulin delivery devices and more. If you are interested, I invite you to read more about at the impact your gift is having every day at jdrf.org/impact.

Motivated and supported by people like you, we will stop at nothing until our collective vision of a world without T1D is achieved. Thank you today, and every day, for all that you do to turn Type One into Type None.

Sincerely,

Troy Lindloff
Chief Development Officer, JDRF
